

SOLID TIMBER

We only use timbers obtained from renewable sources. Timber is a natural product, all the doors are constructed from kiln-dried timber using the best manufacturing processes available.

Kiln-dried timbers are dried to a level suitable for use in a normal kitchen, bedroom and office environment. Technically speaking this is approximately between 8 and 10% which is representative of conditions in occupied houses with normal heating during the winter. Thought should be given before undertaking to put solid products into environments where the conditions may reasonably be expected to differ from normal. With very few exceptions most of the problems associated with timber doors are due to humidity - ask for our technical guide.

PAINTED PRODUCTS

It should be appreciated that painted products are not always suitable for the most demanding of clients, knocks, dents and scratches which can add to the character of solid stained timbers nearly always detracts from the appearance of painted products. In common with all painted surfaces in the home it should be envisaged that further decoration will be required on a similar timescale.

When timbers are painted movement due to changes in humidity can check or crack the painted surface. This is avoidable if you ensure that storage conditions are suitable and that when working with or fitting painted products that the relative humidity is always stable. This is most important in winter when unheated buildings should be avoided and products should be installed in occupied buildings where the heating has been running for a minimum of two weeks - ask for our technical guide.

BESPOKE PRODUCTS

With bespoke joinery, cabinetmaker and spray facilities, small runs of bespoke products can be produced. Flat veneered chipboard panels are available in numerous special veneers such as burr Maple and Wenge with special finishes and various MDF panels in barely imaginable colours.

In fact everything required for projects where a degree of exclusivity is required from the very modern for penthouse apartments to the most exclusive for superyachts.

Call to discuss your requirements.
